## FULL REPORT WITH REASSESSMENT

### Executive Summary

For this security assessment, Securi received a request from Saudi Doge Coin on Wednesday, August 17, 2022.

The Securi team has conducted a comprehensive security assessment of the vulnerabilities. This assessment is tested with an expert assessment. Using the following test requirements

1. Smart Contract Testing with Expert Analysis By testing the most common and uncommon vulnerabilities.
2. Automated program testing It includes a sample vulnerability test and a sample of the potential vulnerabilities being used for the most frequent attacks.
3. Visibility, Mutability, Modifier function testing, such as whether a function can be seen in general, or whether a function can be changed and if so, who can change it.
4. Function association test It will be displayed through the association graph.
5. This safety assessment is cross-checked prior to the delivery of the assessment results.

### Audit Result

Securi evaluated the smart contract security of the Example project and found:

Critical	High	Medium	Low	Very Low	Informational
0	1 [Resolved]	1	2	0	1

Securi has assessed the security of this smart contract.

The results of the security assessment revealed

**No Critical Vulnerabilities.**

## Security Assessment Procedure

Securi has the following procedures and regulations for conducting security assessments:

1. **1.Request Audit** Client submits a form request through the Securi channel. After receiving the request, Securi will discuss a security assessment. And drafting a contract and agreeing to sign a contract together with the Client
2. **2.Auditing** Securi performs security assessments of smart contracts obtained through automated analysis and expert manual audits.
3. **3.Preliminary Report** At this stage, Securi will deliver an initial security assessment. To report on vulnerabilities and errors found under Audit Scope will not publish preliminary reports for safety.
4. **4.Reassessment** After Securi has delivered the Preliminary Report to the Client, Securi will track the status of the vulnerability or error, which will be published to the Final Report at a later date with the following statuses:
  1. **a.Acknowledge** The client has been informed about errors or vulnerabilities from the security assessment.
  2. **b.Resolved** The client has resolved the error or vulnerability. Resolved is probably just a commit, and Securi is unable to verify that the resolved has been implemented or not.
  3. **c.Decline** Client has rejected the results of the security assessment on the issue.
5. **Final Report** Securi providing full security assessment report and public

### Risk Rating

Risk rating using this commonly defined:  $Risk\ rating = impact * confidence$

- 1. Impact** The severity and potential impact of an attacker attack
- 2. Confidence** Ensuring that attackers expose and use this vulnerability

Both have a total of 3 levels: **High, Medium, Low**. By *Informational* will not be classified as a level

Confidence Impact	Low	Medium	High
Low	Very Low	Low	Medium
Medium	Low	Medium	High
High	Medium	High	Critical

**Severity** is a risk assessment It is calculated from the Impact and Confidence values using the following calculation methods,  $Risk\ rating = impact * confidence$  It is categorized into **5 categories based on the lowest severity: Very Low, Low, Medium, High, Critical**. For *Informational* will not be counted as **severity**

## SEC-01: Uninitialized state variables

Type	Severity	Location	Status
Uninitialized state variables	Medium	Line: 680-681	Acknowledge

## Finding:

- ✗ KSADogeToken.\_excluded (Saudi Doge Coin.sol:681) is never initialized. It is used in:
  - KSADogeToken.\_getCurrentSupply() (Saudi Doge Coin.sol#911-921)
- ✗ KSADogeToken.\_isExcluded (Saudi Doge Coin.sol:680) is never initialized. It is used in:
  - KSADogeToken.balanceOf(address) (Saudi Doge Coin.sol#769-772)
  - KSADogeToken.\_takeLiquidity(uint256) (Saudi Doge Coin.sol#923-929)
  - KSADogeToken.\_tokenTransfer(address,address,uint256,bool) (Saudi Doge Coin.sol#1087-1105)

## Recommendation:

Initialize all the variables. If a variable is meant to be initialized to zero, explicitly set it to zero to improve code readability.

### SEC-04: setMarketingFeePercent fee are not limited **[Resolved]**

Type	Severity	Location	Status
setMarketingFeePercent fee are not limited	High	-	<b>Resolved</b>

#### Description:

The owner can use this function to take 100% of the amount to the marketing fee

#### Recommendation:

Add requirements for input data in setMarketingFeePercent

#### Alleviation:

From Lucas [Saudi Doge Coin] : In 2 days time we will deploy a new contract.
