SECURI REPORT TEMPLATE VERSION 1.1

THURSDAY, SEPTEMBER 8, 2022
PHOENIX Security Assessment

FULL AUDIT REPORT

Report Information

About Report	PHOENIX Security Assessment
Version	v1.1
Client	PHOENIX
Language	Solidity
Confidentiality	Public
Platform	BNB Chain (Previously Binance Smart Chain)
Contract Address	0x5c27918DBDF929Cd8DC5b755FF74eA48aAD2F9A4
Audit Method	Whitebox

*Audit Method

Whitebox: Securi Team receives all source code from the client to provide the assessment.
Blackbox: Securi Team receives only bytecode from the client to provide the assessment.

Disclaimer

Regarding this security assessment, there are no guarantees about the security of the program instruction received from the client is hereinafter referred to as “**Source code**”.

And **SECURI** hereinafter referred to as “**Service Provider**”, the **Service Provider** will not be held liable for any legal liability arising from errors in the security assessment. The responsibility will be the responsibility of the **client**, hereinafter referred to as “**Service User**” and the **service user** agrees not to be held liable to the **service provider** in any case. By contract **service provider** to conduct security assessments with integrity with professional ethics, and transparency to deliver security assessments to users The **service provider** has the right to postpone the delivery of the security assessment. If the security assessment is delayed whether caused by any reason and is not responsible for any delayed security assessments. If **the service provider** finds a vulnerability The **service provider** will notify the **service user** via the Preliminary Report, which will be kept confidential for security. The **service provider** disclaims responsibility in the event of any attacks occurring whether before conducting a security assessment. Or happened later All responsibility shall be sole with the **service user**.

Security Assessment Not Financial/Investment Advice Any loss arising from any investment in any project is the responsibility of the investor.

SECURI disclaims any liability incurred. Whether it's Rugpull, Abandonment, Soft Rugpull

SECURI REPORT TEMPLATE VERSION 1.1

FULL AUDIT REPORT

Executive Summary

For this security assessment, Securi received a request from PHEONIX on Wednesday, September 7, 2022.

The Securi team has conducted a comprehensive security assessment of the vulnerabilities. This assessment is tested with an expert assessment. Using the following test requirements

1. Smart Contract Testing with Expert Analysis By testing the most common and uncommon vulnerabilities.
2. Automated program testing It includes a sample vulnerability test and a sample of the potential vulnerabilities being used for the most frequent attacks.
3. Visibility, Mutability, Modifier function testing, such as whether a function can be seen in general, or whether a function can be changed and if so, who can change it.
4. Function association test It will be displayed through the association graph.
5. This safety assessment is cross-checked prior to the delivery of the assessment results.

Audit Result

Securi evaluated the smart contract security of the Example project and found:

Critical	High	Medium	Low	Very Low	Informational
0	0	0	5	0	0

SECURI ✓

Securi has assessed the security of this smart contract.

The results of the security assessment revealed

No Critical Vulnerabilities.

SECURI REPORT TEMPLATE VERSION 1.1

FULL AUDIT REPORT

Security Assessment Procedure

Securi has the following procedures and regulations for conducting security assessments:

1.Request Audit Client submits a form request through the Securi channel. After receiving the request, Securi will discuss a security assessment. And drafting a contract and agreeing to sign a contract together with the Client

2.Auditing Securi performs security assessments of smart contracts obtained through automated analysis and expert manual audits.

3.Preliminary Report At this stage, Securi will deliver an initial security assessment. To report on vulnerabilities and errors found under Audit Scope will not publish preliminary reports for safety.

4.Reassessment After Securi has delivered the Preliminary Report to the Client, Securi will track the status of the vulnerability or error, which will be published to the Final Report at a later date with the following statuses:

a.Acknowledge The client has been informed about errors or vulnerabilities from the security assessment.

b.Resolved The client has resolved the error or vulnerability. Resolved is probably just a commit, and Securi is unable to verify that the resolved has been implemented or not.

c.Decline Client has rejected the results of the security assessment on the issue.

5.Final Report Securi providing full security assessment report and public

SECURI REPORT TEMPLATE VERSION 1.1

FULL AUDIT REPORT

Risk Rating

Risk rating using this commonly defined: $Risk\ rating = impact * confidence$

Impact The severity and potential impact of an attacker attack

Confidence Ensuring that attackers expose and use this vulnerability

Both have a total of 3 levels: **High, Medium, Low**. By *Informational* will not be classified as a level

Confidence Impact	Low	Medium	High
Low	Very Low	Low	Medium
Medium	Low	Medium	High
High	Medium	High	Critical

Severity is a risk assessment It is calculated from the Impact and Confidence values using the following calculation methods, $Risk\ rating = impact * confidence$ It is categorized into **5 categories based on the lowest severity: Very Low, Low, Medium, High, Critical**.

For **Informational** will not be counted as **severity**

SECURI REPORT TEMPLATE VERSION 1.1

FULL AUDIT REPORT

SEC-01: Unchecked tokens transfer

Type	Severity	Location	Status
Unchecked tokens transfer (unchecked-transfer)	Low	Line: 661-666	Acknowledge

Finding:

✗ PHOENIX.ReleaseLP() (PHOENIX.sol:661-666) ignores return value by liquidityToken.transfer(msg.sender,amount) (PHOENIX.sol#665)

Recommendation:

Use `SafeERC20`, or ensure that the transfer/transferFrom return value is checked.

Reference: <https://github.com/crytic/slither/wiki/Detector-Documentation#unchecked-transfer>

Alleviation:

Phoenix Team has acknowledge this issues.

SECURI REPORT TEMPLATE VERSION 1.1

FULL AUDIT REPORT

SEC-02: Unused return values

Type	Severity	Location	Status
Unused return values (unused-return)	Low	Line: Check on finding	Acknowledge

Finding:

- ✗ PHOENIX.ExcludeAccountFromFees(address) (PHOENIX.sol:1068-1071) ignores return value by `_excluded.add(account)` (PHOENIX.sol#1069)
- ✗ PHOENIX.ExcludeFromStaking(address) (PHOENIX.sol:1015-1026) ignores return value by `_excludedFromStaking.add(addr)` (PHOENIX.sol#1024)
- ✗ PHOENIX.IncludeAccountToFees(address) (PHOENIX.sol:1074-1077) ignores return value by `_excluded.remove(account)` (PHOENIX.sol#1075)
- ✗ PHOENIX.IncludeMeToStaking() (PHOENIX.sol:1029-1035) ignores return value by `_excludedFromStaking.remove(msg.sender)` (PHOENIX.sol#1032)
- ✗ PHOENIX.IncludeToStaking(address) (PHOENIX.sol:1037-1044) ignores return value by `_excludedFromStaking.remove(addr)` (PHOENIX.sol#1040)
- ✗ PHOENIX.RemoveLP() (PHOENIX.sol:669-685) ignores return value by `_pancakeRouter.removeLiquidityETHSupportingFeeOnTransferTokens(address(this),amount,0,0,address(this),block.timestamp)` (PHOENIX.sol#675-682)
- ✗ PHOENIX.RemoveLP() (PHOENIX.sol:669-685) ignores return value by `liquidityToken.approve(address(_pancakeRouter),amount)` (PHOENIX.sol#674)
- ✗ PHOENIX.SetDevWallet(address) (PHOENIX.sol:1058-1064) ignores return value by `_excluded.add(Developer)` (PHOENIX.sol#1062)
- ✗ PHOENIX.SetMarketingWallet(address) (PHOENIX.sol:1048-1054) ignores return value by `_excluded.add(MarketingWallet)` (PHOENIX.sol#1052)
- ✗ PHOENIX._addLiquidity(uint256,uint256) (PHOENIX.sol:858-869) ignores return value by `_pancakeRouter.addLiquidityETH{value:bnbamount}(address(this),tokenamount,0,0,address(this),block.timestamp)` (PHOENIX.sol#860-868)

SECURI REPORT TEMPLATE VERSION 1.1

FULL AUDIT REPORT

SEC-03: Missing Zero Address Validation

Type	Severity	Location	Status
Missing Zero Address Validation (missing-zero-check)	Low	Line: Check on findings	Acknowledge

Finding:

- ✗ PHOENIX.ChangeMiscReward(address).newReward (PHOENIX.sol:638) lacks a zero-check on :
 - MiscReward = newReward (PHOENIX.sol#639)
- ✗ PHOENIX.SetDevWallet(address).addr (PHOENIX.sol:1058) lacks a zero-check on :
 - Developer = addr (PHOENIX.sol#1061)
- ✗ PHOENIX.SetMarketingWallet(address).addr (PHOENIX.sol:1048) lacks a zero-check on :
 - MarketingWallet = addr (PHOENIX.sol#1051)

Recommendation:

Check that the address is not zero.

Reference: <https://github.com/crytic/slither/wiki/Detector-Documentation#missing-zero-address-validation>

Alleviation:

Phoenix Team has acknowledge this issues.

SECURI REPORT TEMPLATE VERSION 1.1

FULL AUDIT REPORT

SEC-04: Dangerous usage of `block.timestamp`

Type	Severity	Location	Status
Dangerous usage of `block.timestamp` (timestamp)	Low	Line: Check on findings	Acknowledge

Finding:

- ❌ PHOENIX.RecoverBNB() (PHOENIX.sol:688-693) uses timestamp for comparisons
 - require(bool,string)(block.timestamp >= _liquidityUnlockTime,Not yet unlocked) (PHOENIX.sol#689)
- ❌ PHOENIX.ReleaseLP() (PHOENIX.sol:661-666) uses timestamp for comparisons
 - require(bool,string)(block.timestamp >= _liquidityUnlockTime,Not yet unlocked) (PHOENIX.sol#662)
- ❌ PHOENIX.RemoveLP() (PHOENIX.sol:669-685) uses timestamp for comparisons
 - require(bool,string)(block.timestamp >= _liquidityUnlockTime,Not yet unlocked) (PHOENIX.sol#670)
- ❌ PHOENIX._lockLiquidityTokens(uint256) (PHOENIX.sol:654-658) uses timestamp for comparisons
 - require(bool)(newUnlockTime > _liquidityUnlockTime) (PHOENIX.sol#656)
- ❌ PHOENIX.getLiquidityUnlockInSeconds() (PHOENIX.sol:1157-1162) uses timestamp for comparisons
 - block.timestamp < _liquidityUnlockTime (PHOENIX.sol#1158)

Recommendation:

Avoid relying on `block.timestamp`.

Reference: <https://github.com/crytic/slither/wiki/Detector-Documentation#block-timestamp>

Alleviation:

Phoenix Team has acknowledge this issues.

SECURI REPORT TEMPLATE VERSION 1.1

FULL AUDIT REPORT

SEC-05: Missing Events Arithmetic

Type	Severity	Location	Status
Missing Events Arithmetic (events-maths)	Low	Line: Check on findings	Acknowledge

Finding:

- ✗ PHOENIX.WithdrawDev(uint256) (PHOENIX.sol:989-994) should emit an event for:
 - DevBalance -= amount (PHOENIX.sol#991)
- ✗ PHOENIX.WithdrawMarketing(uint256) (PHOENIX.sol:1005-1010) should emit an event for:
 - MarketingBalance -= amount (PHOENIX.sol#1007)

Recommendation:

Emit an event for critical parameter changes.

Reference: <https://github.com/crytic/slither/wiki/Detector-Documentation#missing-events-arithmetic>

Alleviation:

Phoenix Team has acknowledge this issues.
